

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Working with code in smaller parts instead of working with a longer code.

2. What parts of encapsulating your logic were hard?

Making changes to old code

It would be easier to do it has you are coding a new code rather than working with a code that already has a purpose.

3. Is abstracting the book preview a good or bad idea? Why?

Good because it makes it easy to maintain, readable and it stops the need to repeat a code by calling a function when the code is needed.
